

# **Energy and Momentum Conservation in Bohm's Model for Quantum Mechanics**

**Bryan Hall**

**Ph.D. Thesis**

**University of Western Sydney**

**2004**

## ***Abstract***

Bohm's model for quantum mechanics is examined and a well-known drawback of the model is considered, namely the fact that the model does not conserve energy and momentum. It is shown that the Lagrangian formalism and the use of energy-momentum tensors provide a way of addressing this non-conservation aspect once the model is considered from the point of view of an interacting particle-field system. The full mathematical formulation that is then presented demonstrates that conservation can be reintroduced without disrupting the present agreement of Bohm's model with experiment.

## ***Acknowledgement***

I would most sincerely like to thank Dr Rod Sutherland for his continual guidance and suggestions, as well as his careful checking of the text of this thesis.

I would also like to thank the examiners for their work in preparing reports and suggesting various minor amendments to the thesis. The examiners made the following favourable comments:

### **Dr Sheldon Goldstein:**

"This thesis is a very nice piece of work. It is written with exceptional clarity and facility of expression, and marks a significant contribution to the field."

### **Dr David Miller:**

"The problem with Bohmian mechanics addressed by the thesis concerns energy and momentum conservation and is therefore fundamental. It is timely and important that the problem be addressed. The work in the thesis provides a solution to the problem and therefore makes a significant and original contribution to the discipline."

### **Dr Craig Callender:**

"I recommend that the degree be awarded. Any errors I found were unimportant ones. My overall impression is that this dissertation is a very fine work in foundations of physics."

This is to certify that the work embodied in this thesis is original and has not been submitted for a higher degree at any other institution.

Bryan Hall

## **Contents**

|  |           |
|--|-----------|
| <b>Chapter 1: Introduction .....</b>   | <b>1</b>  |
| <b>Chapter 2: Interpretations of Quantum Mechanics &amp; the Measurement Problem ...</b> | <b>4</b>  |
| 2.1 Historical Context.....  | 4         |
| 2.2 Mathematical Structure and Statistical Interpretation .....                          | 5         |
| 2.3 The Correspondence Principle.....  | 6         |
| 2.4 The Copenhagen Interpretation .....  | 6         |
| 2.5 Hidden Variable Theories.....  | 9         |
| <b>Chapter 3: Bohm's Model .....</b>   | <b>12</b> |
| 3.1 Summary of Bohm's Model.....   | 12        |
| 3.1.1 Equation of Continuity .....   | 13        |
| 3.1.2 Hamiltonian - Energy Considerations .....  | 15        |
| 3.1.3 Potential Gradient and Force in Bohm's Model.....                                  | 16        |
| 3.2 Velocity as a Function of Position - Bohm's Equation of Motion .....                 | 17        |
| 3.3 Bohm's Model and Conventional Quantum Mechanics.....                                 | 19        |
| 3.4 Energy and Momentum Not Conserved .....  | 20        |
| 3.4.1 Restoring Conservation .....   | 22        |
| 3.5 Extensions to Bohm's Model .....   | 23        |
| 3.5.1 Holland's Generalisation .....   | 24        |
| 3.5.2 Deoto and Ghiradi's Generalisation .....   | 25        |
| 3.5.3 Sutherland's Generalisation .....  | 26        |
| <b>Chapter 4: Lagrangian Formalism.....</b>  | <b>28</b> |
| 4.1 Lagrangian Formalism for Particle Motion .....                                       | 28        |
| 4.2 Lagrangian Formalism for Fields .....  | 30        |

|   |           |
|---|-----------|
| 4.3 Noether's Theorem & Conservation.....   | 33        |
| 4.4 Overall Lagrangian for a Particle & Field in Interaction .....                                  | 33        |
| 4.5 Squires attempted Lagrangian Formulation of Bohmian Mechanics .....                             | 35        |
| <b>Chapter 5: A Lagrangian Formulation of Bohms Model.....</b>                                      | <b>38</b> |
| 5.1 Proposed Lagrangian Density.....  | 38        |
| 5.2 Derivation of Bohm's Equation of Motion from the Lagrangian Density .....                       | 41        |
| 5.3 Field Equation Deriving from the Proposed Lagrangian Density .....                              | 42        |
| 5.4 Consistency of the Derived Field Equation with Experiment.....                                  | 47        |
| <b>Chapter 6: Energy-Momentum Tensors.....</b>  | <b>49</b> |
| 6.1 Basic Theory.....   | 49        |
| 6.2 Energy-Momentum Tensor for a Scalar Field.....  | 50        |
| 6.3 Energy and Momentum for a Scalar Field interacting with a Particle .....                        | 51        |
| 6.3.1 Energy and Momentum Conservation Equations.....   | 51        |
| 6.3.2 Introduction of $T^{\mu\nu}_{\text{particle}}$ .....  | 53        |
| 6.3.3 Global Equations .....  | 54        |
| 6.4 Tentative Application to Bohm's Model.....  | 55        |
| <b>Chapter 7: Relativistic Treatment .....</b>  | <b>60</b> |
| 7.1 De Broglie's Model .....  | 61        |
| 7.2 Lagrangian Density for de Broglie's Model.....  | 63        |
| 7.3 Equation of Motion for the Particle.....  | 66        |

**Please Note:**

The symbol for the quantity “h bar” (= Planck’s constant divided by  $2\pi$ ) appears as **h** in the printing of this thesis (i.e., as a letter h with a small gap in its vertical stroke).
